

Introduced the world's first commercially available insulin.

Introduced the first human insulin identical to that produced by the body.

Introduced the first indications for adult GHD and Turner syndrome.

Introduced the first approved SERM, a unique line of osteoporosis treatment.

The success of tomorrow is rooted in the past.

We've always valued our relationships with endocrinologists. And for more than 80 years, our partnership has created advancements once thought impossible. Because of this collaboration, the future looks even stronger than the past.
